SUMMARY

Senior Frontend Developer with 6.5+ years of experience building scalable, high-performance web applications using React.js, Next.js, Vue.Js, React Native, TypeScript, JavaScript, SQL, Node.js and Express.js, across FinTech, Manufacturing, and Enterprise domains.

Strong expertise in frontend architecture, reusable component systems, state management, API integration, authentication, accessibility, and application performance. Experienced in building AI-powered applications using LLM streaming, contextual AI workflows, Google Gemini, and modern AI SDKs.

Proven experience working across the complete frontend development lifecycle, from architecture and technical implementation to performance optimization, production troubleshooting, and release delivery. Comfortable partnering with Product, UX, Backend, QA, and DevOps teams to deliver secure, maintainable, and scalable applications.

TECHNICAL SKILLS

Frontend: React.js, Next.js (SSR/SSG), React Native, Vue.js, Nuxt.js, TypeScript, JavaScript (ES6+), HTML5, SASS, Styled Components

State & Data Layer: Redux Toolkit, GraphQL, REST APIs, Hygraph (Headless CMS), Dynamic Schemas

Backend & APIs: Node.js, Express.js, REST API Design, API Authentication & Authorization

Cloud & Infrastructure: AWS S3, CloudFront CDN, Edge Caching, Cache Invalidation Strategies, Docker (Multi-stage Builds)

Database: PostgreSQL, Supabase

Performance & System Design: Core Web Vitals, Code Splitting, Webpack/Babel Bundling, Client-side Caching

Tools & Observability: Quantum Metric, Amplitude, Splunk Cloud, ESLint, Git, GitHub, GitLab, JIRA, Jenkins, Azure

AI/GenAI: Gemini, AI SDK, LLM Streaming, Context-aware AI Workflows, Prompt Engineering

AI-Assisted Development: GitHub Copilot, Cursor IDE, ChatGPT, Claude, AI-assisted Code Refactoring, Rapid Prototyping

WORK EXPERIENCE

Komax Group, Pune, India

Senior Frontend Engineer | Mar 2026 – Present

Komax Digital Platform:

- Architected scalable frontend solutions for the Komax Digital Platform using **React.js, Next.js, TypeScript, and GraphQL.**
- Built reusable UI components and frontend architecture patterns, improving maintainability and consistency across enterprise applications.
- Integrated **GraphQL APIs and Hygraph CMS** to deliver multilingual, content-driven experiences for global users.
- Optimized application performance through lazy loading, memoization, code splitting, and efficient rendering techniques.
- Collaborated with product managers, UX designers, backend engineers, and QA teams to deliver production-ready features.
- Participated in code reviews, technical discussions, CI/CD processes, and mentoring to promote engineering best practices.

Western Union Services | Pune, India

Frontend Engineer | Apr 2023 – Feb 2026

Canada Money Transfer Platform (React.js | Next.js | React Native)

- Developed enterprise-grade secure, customer-facing money transfer applications using **React.js, Next.js, React Native, and TypeScript**, enabling international remittances for customers in Canada.
- Delivered end-to-end **KYC (Know Your Customer)** verification workflows by integrating enterprise identity management libraries and reusable UI components to support regulatory compliance.
- Developed core transaction journeys including **Recipient Management, Bank Account Transfers, Debit/Credit Card Payments, and Cash Pickup Transactions,** ensuring secure and seamless user experiences.
- Built reusable, responsive frontend components using Western Union's internal design system, improving consistency and maintainability across multiple application modules.
- Integrated **GraphQL APIs** to support real-time transaction processing, payment workflows, recipient management, and dynamic business logic.
- Implemented secure authentication and authorization mechanisms while collaborating with backend teams to deliver reliable financial services.
- Optimized frontend performance using memoization, lazy loading, efficient rendering strategies, and state management best practices to improve responsiveness.
- Investigated and resolved production issues using **Splunk, Quantum Metric, and Amplitude**, performing root cause analysis to improve application stability and customer experience.
- Collaborated closely with Product Managers, UX Designers, QA Engineers, and Backend Developers throughout feature planning, code reviews, testing, and production releases.

International Money Transfer Web Application

- Developed responsive cross-platform user interfaces using **React.js, Next.js, and TypeScript** for international money transfer services.
- Built reusable components using Western Union's internal **Material UI Design** System, ensuring consistency across customer-facing applications.
- Integrated GraphQL APIs to manage sender, recipient, and transaction workflows while delivering seamless real-time user experiences.

GLOBANT | Pune, India

Web UI Developer | May 2022 – Apr 2023

Document Audit Platform

- Developed scalable frontend features using React.js for an enterprise document auditing platform supporting multilingual document review and annotation workflows.
- Designed reusable UI components and implemented advanced document annotation, highlighting, and search capabilities to improve auditing efficiency.
- Managed application state using Redux and integrated REST APIs to build scalable document retrieval, annotation, and search workflows while ensuring predictable state management, efficient data synchronization, and robust error handling.
- Integrated backend APIs to support real-time document retrieval, metadata management, and dynamic search functionality.
- Optimized application performance through component reusability, efficient rendering strategies, and responsive UI development.
- Collaborated with product owners, QA engineers, and backend developers to deliver high-quality features following Agile development practices.

HCL TECHNOLOGIES | India

Frontend Developer | Oct 2019 – Mar 2022

Enterprise Time Tracking Application:

- Developed responsive web applications using React.js, JavaScript, HTML5, and CSS3 for employee attendance and time management systems.
- Designed reusable UI components for time tracking, timesheet management, reporting dashboards, and employee workflows.
- Integrated REST APIs and managed application state to deliver dynamic, data-driven user interfaces with seamless user interactions.
- Collaborated with backend developers, QA engineers, and business stakeholders to deliver high-quality features following Agile methodologies.
- Optimized application responsiveness, usability, and maintainability through reusable component architecture and frontend best practices.

PROJECTS & AI ENGINEERING

KnowlyAI - AI Powered Knowledge Assisitance

- Architected a full-stack AI-powered knowledge platform enabling users to create, manage, and interact conversationally with their notes using Google Gemini.
- Designed a production-style architecture using Next.js + React frontend, Express.js backend, Supabase PostgreSQL, and Supabase Auth.
- Implemented Retrieval-Augmented Generation (RAG) using note chunking, Gemini embeddings, PostgreSQL pgvector similarity search, and context-aware prompt construction to ground AI responses in user-specific notes.
- Built persistent AI conversations with conversation/message history, streaming AI responses, and quick actions including Explain, Summarize, and Quiz.
- Developed contextual question-answering workflows with note-scoped retrieval and source attribution. Built a responsive AI workspace supporting mobile bottom-sheet interaction, tablet fixed-height chat, and desktop two-column layouts.
- Implemented streaming states, request cancellation, retry handling, accessible keyboard interactions, protected routes, authentication/authorization, and API ownership validation.
- Established service-layer API abstractions and reusable component patterns to maintain separation of concerns and scalability.
- Technology: Next.js, React, TypeScript, Express.js, Supabase, PostgreSQL, pgvector, Supabase Auth, Google Gemini, AI SDK

Face Aging using CycleGAN (AI Research)

- Developed a CycleGAN-based Generative Adversarial Network (GAN) to generate realistic age-progressed facial images while preserving the subject's identity.
- Trained and evaluated deep learning models using facial image datasets to predict age progression from 30–40 years to 60–70 years.
- Conducted research on image-to-image translation techniques, identity preservation, and generative deep learning models.
- Published the research work at the IEEE International Conference on Intelligent Information Systems (ICIIS 2018).

EDUCATION

- Bachelor of Technology (B.Tech), Electronics & Telecommunication SGGS Institute of Engineering and Technology, Nanded (2015 – 2019)
- Higher Secondary School (Science) Independent Junior College, Rural Institute, Amravati (2013 – 2015)
- Secondary School Adarsha High School, Daryapur, Amravati (March 2013)

RESEARCH & PUBLICATIONS

Cycle Face Aging with GANs(AI)
